# Quality of Life and Quality of Life Years

Friday, 19 March 2010  
1.00pm – 2pm  
MSB.1.01

**Professor Anthony A.J. Marley**  
University of Victoria, Canada

### **Abstract:**

There is a vast literature on measures of quality of life, and of the related quality of life years (QALYs), with applications in policy and patient decision making. I will summarize and discuss the main methods of obtaining such measures (ratings, time trade-offs, standard gambles, and discrete choice experiments) and briefly mention recent stochastic process models of those methods.
